HAN ZHANG

SOFTWARE ENGINEER

Vancouver, BC | +1 672 208 3120 | kakiorrah99@outlook.com | kakiooo.github.io/PortfolioWebsite | github.com/Kakiooo

SUMMARY

Game developer who fell for games first as a player and then as a builder, and never really stopped. I love the moment a system I wrote finally feels right, and I chase that across every project I take on. I bring a computer science foundation and solid software engineering habits to that enthusiasm, so what I build holds up as it grows, and I have spent a lot of my recent work on multiplayer and networked gameplay, which is the hardest and most rewarding thing I have built. Currently shipping networked games in Unity across PC, mobile, and VR.

EXPERIENCE

Developer Apr 2026 - Present

Kaiju Corp, Centre for Digital Media Game Project

- Engineered the networking systems for cross-platform multiplayer in Unity with Photon Fusion, keeping PC players in sync with players on other platforms
- Designed the momentum-driven character movement system, tuning acceleration and feel for the Three Cs
- Developed the PC player systems, including camera, controls, and the weapon system
- Optimised performance by reducing overwhelming visual detail, keeping the game running smoothly over the network
- Created a custom Unity editor tool for previewing and adjusting particle system VFX, streamlining the art implementation pipeline
- Implemented the PC-side UI across the supported platforms
- Delivered a fully playable build in under 3 months with a 4-person team, testing across platforms before each milestone

Developer Jan 2026 - Apr 2026

Centre for Digital Media, Crossworld Chronicles, Client Project for Coal Car Studio Ltd.

- Implemented real-time multiplayer for a cooperative VR vertical slice on Meta Quest
- Deployed dedicated multiplayer server hosting on PlayFab Multiplayer Servers to support online co-op sessions
- Developed the XR interaction systems for VR hardware
- Built the mana and weapon systems driving core combat
- Designed the tower placement system behind the game's tower defence elements
- Debugged synchronisation, networked session, and VR interaction issues across the build
- Applied data structures, OOP, and design patterns to keep the multiplayer architecture maintainable
- Worked with the development team, coordinating tasks, code standards, and build verification ahead of milestone deliveries

Junior QA Engineer (Internship) Jul 2023 - Aug 2023

IGG Inc. (I Got Game)

- Tested mobile game builds, triaged bugs, and ran routine reliability checks, verifying fixes before milestone deadlines
- Sped up issue resolution by writing clear reports for the development team and confirming features and fixes with the design team
- Worked directly with developers to reproduce issues and validate that fixes did not introduce new problems

Teaching Assistant Dec 2022 - Jul 2023

IGA Institution for Game Portfolio

- Tutored students in Unity and programming, guiding them from concept to a playable, milestone-tested vertical slice prototype in under two weeks

EDUCATION

Master of Digital Media 2025 - 2027

Centre for Digital Media, a joint program by SFU, UBC, ECU, and BCIT

- Holds a 3-year post-graduation work permit, authorized to work in Canada

BA (Hons) Game Design 2022 - 2025

University of the Arts London

- First-Class Honours, specialised in software development in Unity

SKILLS

Programming	C#, C++, Python
Specialties	Character Control, NPC AI & State Machines, Multiplayer & Networked Gameplay, UI, VR / XR
Core CS Skills	Data Structures & Algorithms, OOP & Design Patterns, Editor Tool Scripting, Testing & Debugging
Tools	Unity, Unreal Engine, Git / GitHub, Azure DevOps, PlayFab, Jira
Platforms	PC, Mobile, VR / XR (Meta Quest), Cross-platform Multiplayer
Soft Skills	Communication, Team Collaboration, Time Management, Complex Problem Solving, Accountability, Self-driven, Team Leadership
